

The hammer-in plug for a simple, fast and economical installation

Timber substructures

Cable ducts

VERSIONS

- Zinc-plated steel
- Stainless steel

BUILDING MATERIALS

- Concrete
- Solid sand-lime brick
- Building brick
- Natural stone
- Solid brick made from lightweight concrete
- Aerated concrete
- Solid panel made from gypsum
- Vertically perforated brick
- Perforated sand-lime brick
- Hollow blocks made from lightweight concrete

CHARACTERISTICS

ADVANTAGES

- The rapid hammer-in installation reduces the amount of time required and allows for an economic series installation
- The integrated hammer-in stop prevents the plug from expanding prematurely (jamming), thus enabling a problem-free installation
- Together with the cross-slot recess, the thread of the nail screw allows the screw to be removed, thus allowing for subsequent dismantling
- The wide range of diameters, usage lengths and head shapes provides the correct plug for every fixing

APPLICATIONS

- Substructures made of wood and metal
- Wall connection or plaster profiles
- Slides
- Sheets
- Cable and pipe clips
- Punched tapes

FUNCTIONING

- The Hammerfix N is suitable for push-through installation
- When hammered in, the nail screw causes the plug to expand in two directions, thus providing a secure anchoring in the building material
- Countersunk head plugs are recommended for the installation of timber constructions; in the case of metal constructions, use flat-head plugs, and use pan-head plugs for long holes
